Supply Chain Risk Management: Advanced Tools, Models, and Developments

A book edited by: Yacob Khojasteh, Ph.D.

(Associate Professor of Operations Management, Sophia University, Tokyo, Japan)

Publisher: Springer

Supply chains today are vulnerable to disruptions with a significant impact on firms business and performance. This is what we saw in the Grate East Japan earthquake, which hit the north-eastern parts of Japan on March 11 in 2011, and disrupted both domestic and global supply chains. It caused a significant disruption in supply chains so that many companies and their part suppliers were unable to deliver products at expected volumes for several months. The major objective of this proposed book is to have an excellent collection of book chapters from leading academics and scholars. Chapters will cover models, strategies, research findings and analyses that are essential for managing supply chain risks. The book could be an essential source for students and scholars who are interested in supply chain management. It could also provide an informative read for managers and practitioners who need to deepen their knowledge on supply chain risk management.

Topics covered:

Potential topics related to supply chain risk management include, but are not limited to the following:

- Strategies and practices in managing supply chain disruptions
- Sourcing, inventory, and production strategies to manage supply disruptions
- Supply chain risk identification, analysis, and assessment
- Supply chain risk measurement (validity and reliability)
- Integrated risk management and risk mitigation methods (internal and external)
- Operational strategies for SCRM (supply, demand, process)
- Models and frameworks for supply chain risks
- Optimization models in SCRM
- Role of knowledge management and information technology in SCRM
- Supply chain visibility, predictability, resiliency and sustainability
- Designing and creating a resilient supply chain
- Continuity of operations and recovery plans development
- Case studies and industrial applications
- Literature review (to provide theoretical insights based on review of relevant literature)

Submission:

Interested contributors are invited to submit a 2-3 page chapter proposal clearly explaining the aims and objectives of the proposed chapter by **October 15, 2015**.

The proposal should contain:

- 1) Title of the proposed chapter, 2) Author(s) of the chapter (including position and affiliation), 3) Type of contribution (research paper, case study, etc.), 4) Estimated number of pages, 5) Keywords (2 to 5), 6) Extended abstract (up to 500 words) describing contents of the book chapter (including methodology).

Important Dates:

October 15, 2015:	Proposal Submission Deadline
October 25, 2015:	Notification of Acceptance
February 28, 2016:	Full Chapter Submission
May 31, 2016:	Review Results Returned
July 31, 2016:	Revised Chapter Submission
October 31, 2016:	Final Chapter Submission
